

# LAB 2.1 - APPLICATION DEVELOPMENT AND VERSION CONTROL

Date: September 23, 2024

---

## 1 Setup

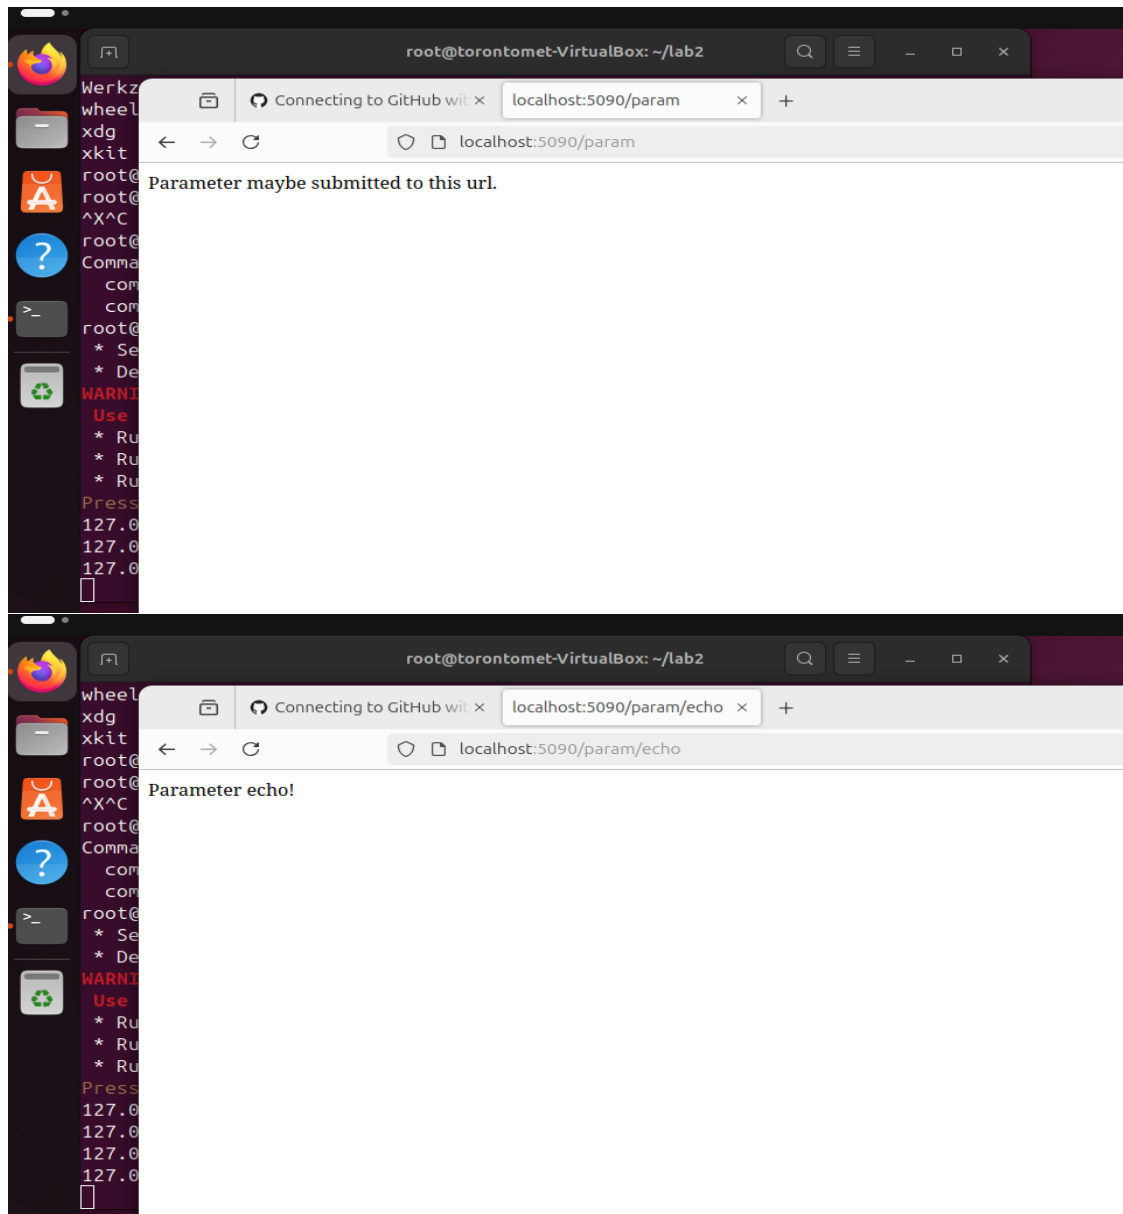

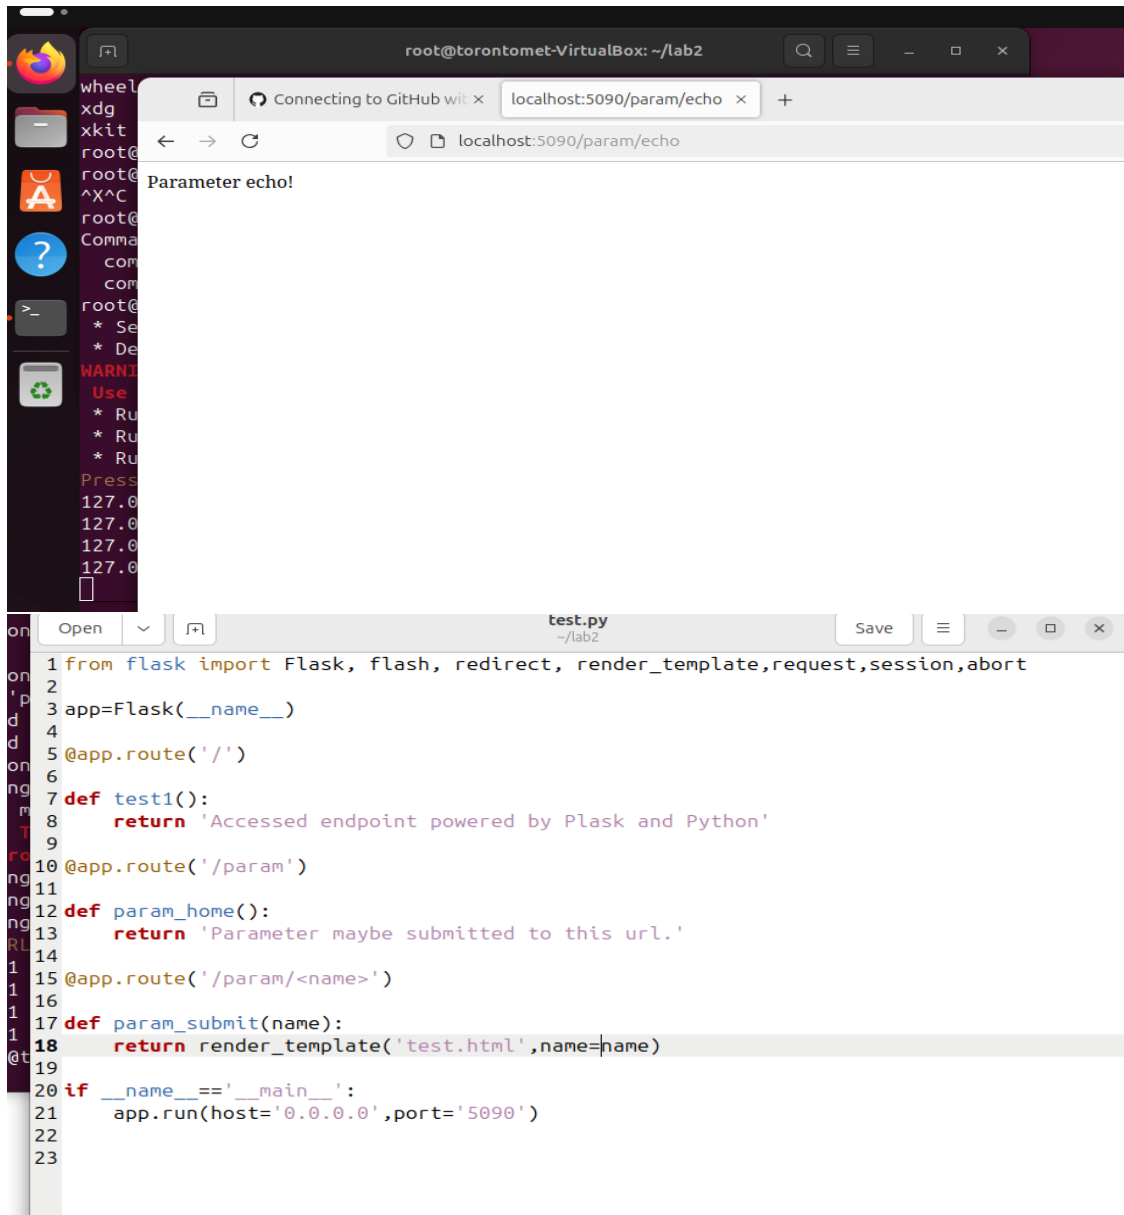

The image shows a code editor window titled 'test.py' with the following Python code:

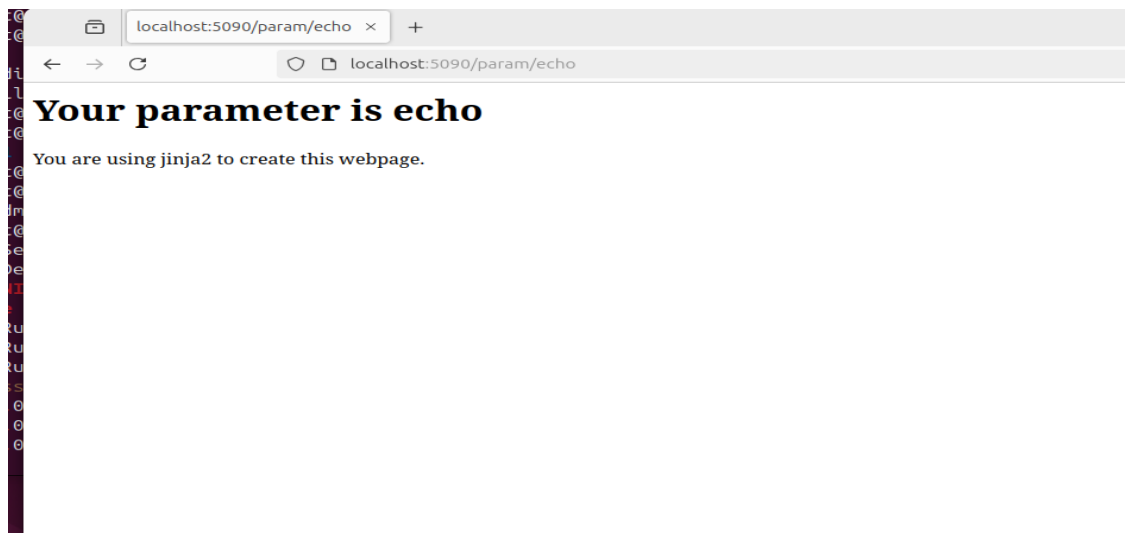

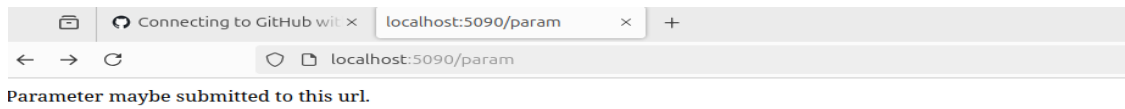

```
1 from flask import Flask, flash, redirect, render_template, request, session, abort
2
3 app = Flask(__name__)
4
5 @app.route('/')
6
7 def test1():
8     return 'Accessed endpoint powered by Plask and Python'
9
10 @app.route('/param')
11
12 def param_home():
13     return 'Parameter maybe submitted to this url.'
14
15 @app.route('/param/<name>')
16
17 def param_submit(name):
18     return 'Parameter %s!' % name
19
20 if __name__ == '__main__':
21     app.run(host='0.0.0.0', port='5090')
22
23
```

Below the code editor, a web browser window is open at 'localhost:5090/'. The browser's address bar shows 'localhost:5090' and the page content displays 'Accessed endpoint powered by Plask and Python'. In the background, a terminal window is visible, showing the command 'python test.py' being executed, which outputs 'Accessed endpoint powered by Plask and Python'.

## 2 Accessing localhost and template

```
root@torontomet-VirtualBox: ~/lab2
readme.txt  templates  test.py
root@torontomet-VirtualBox:~/lab2# python3 test.py
* Serving Flask app 'test'
* Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment.
Use a production WSGI server instead.
